Bringing better Monero UX to 600k+ users

About Cake Wallet

Cake Wallet exists to make self custody achievable, financial privacy approachable, and freedom money accessible.

We were the first Monero wallet on iOS, and have expanded to bring Monero to 600k+ users and are working to bring the next generation of Monero UX to the world.

Background sync

Breaking down the greatest barrier to Monero usage.

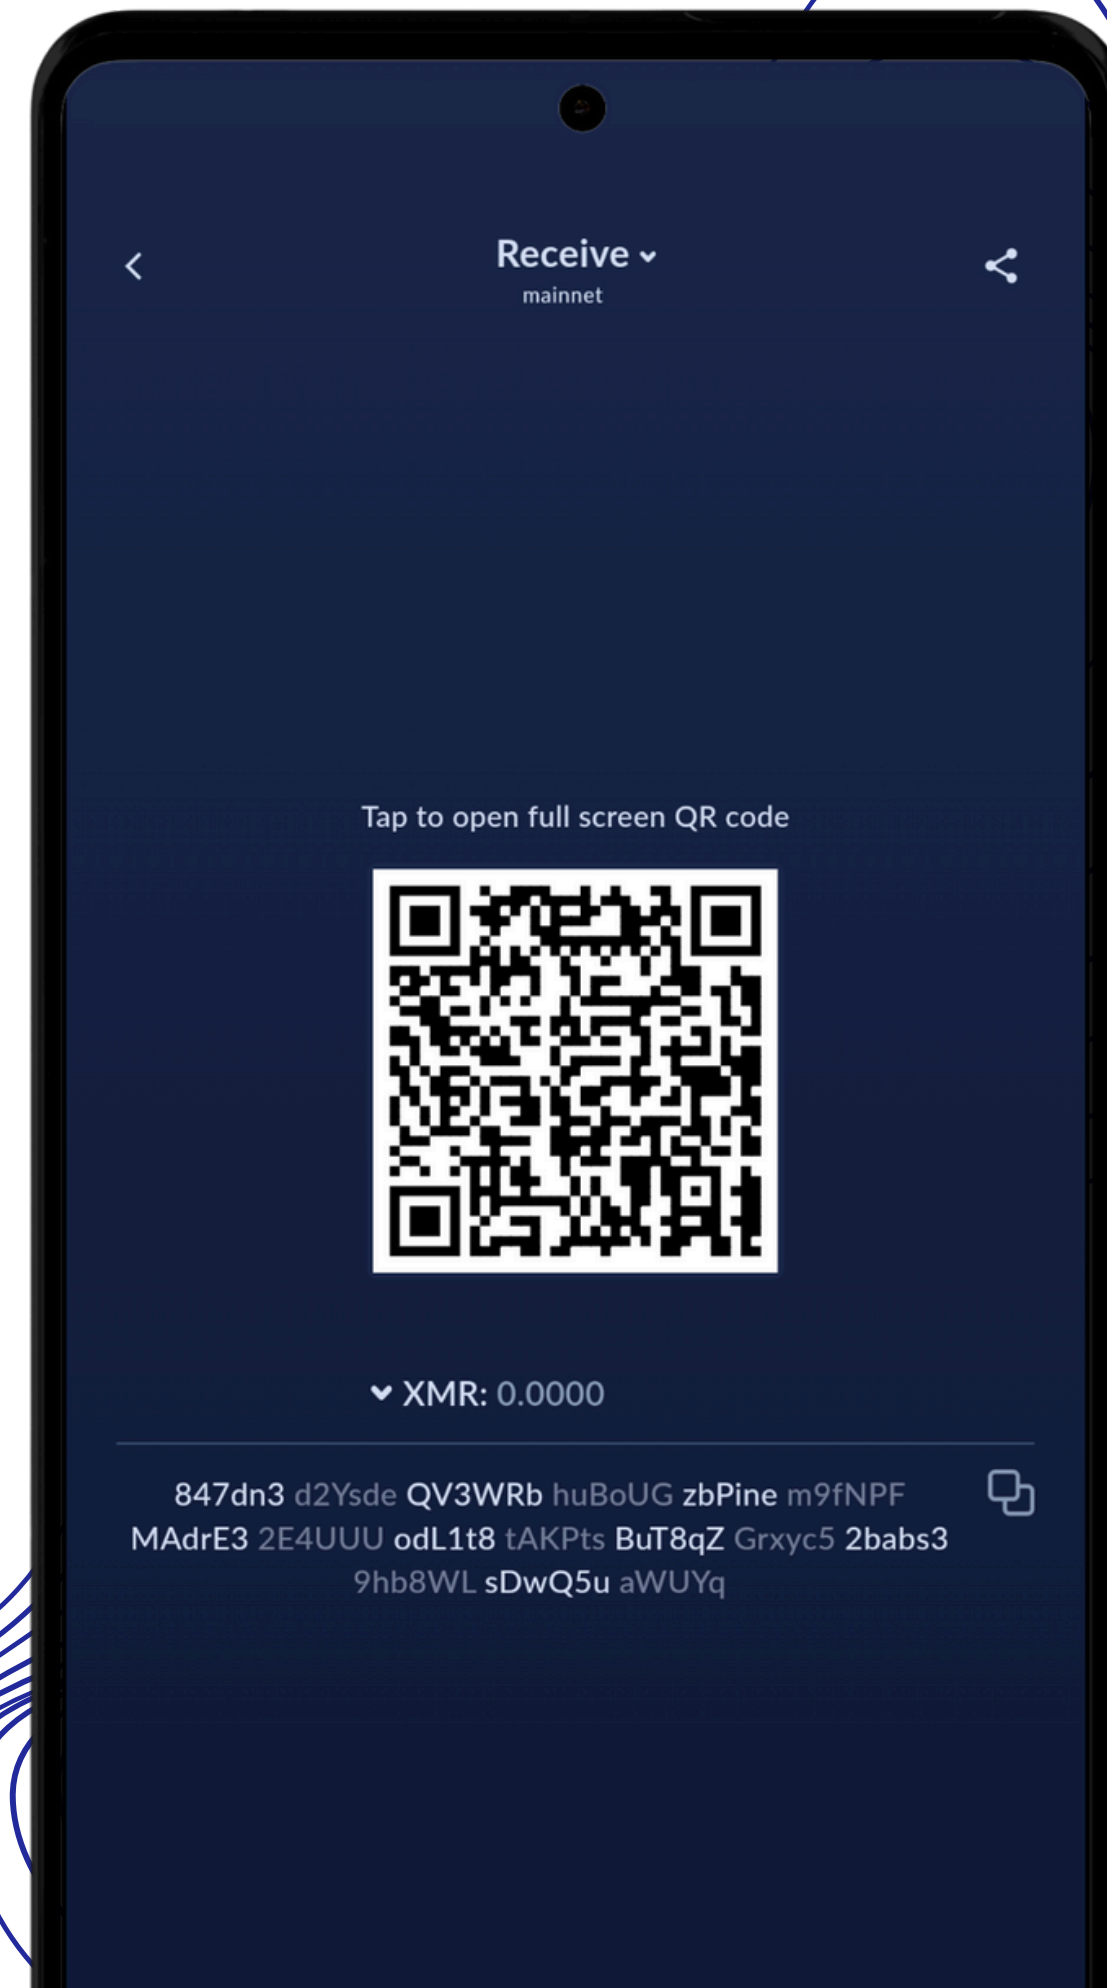

Monero's sync UX is by far the greatest barrier of entry to usage, and has long been a thorn in our side.

Background sync gives users the same UX for Monero as for Bitcoin and other transparent currencies – without giving up any privacy.

Better address display

Long addresses? No problem.

Implementing the Bitcoin Design address guidelines makes Monero addresses far easier to read and verify at a glance.

Thank you, Monero comm
