

SILENT PAYMENTS

MAKE ADDRESSES
GREAT AGAIN

ABOUT CAKE WALLET

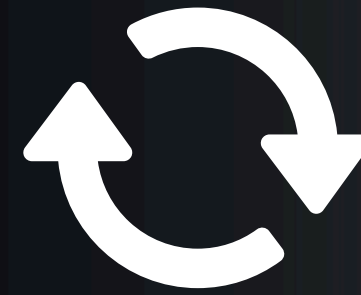

Privacy made easy

Cake Wallet exists to make self custody achievable, financial privacy approachable, and freedom money accessible.

WHY SILENT PAYMENTS?

Silent Payments are a crucial step forward for Bitcoin's user experience that *also* helps user privacy.

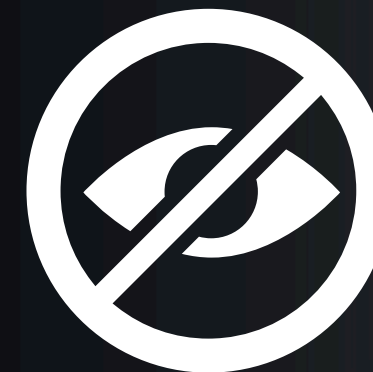

No rotating addresses

Presentations are tools that can be used as speeches.

Bitcoin usernames

Presentations are tools that can be used as speeches.

Better privacy

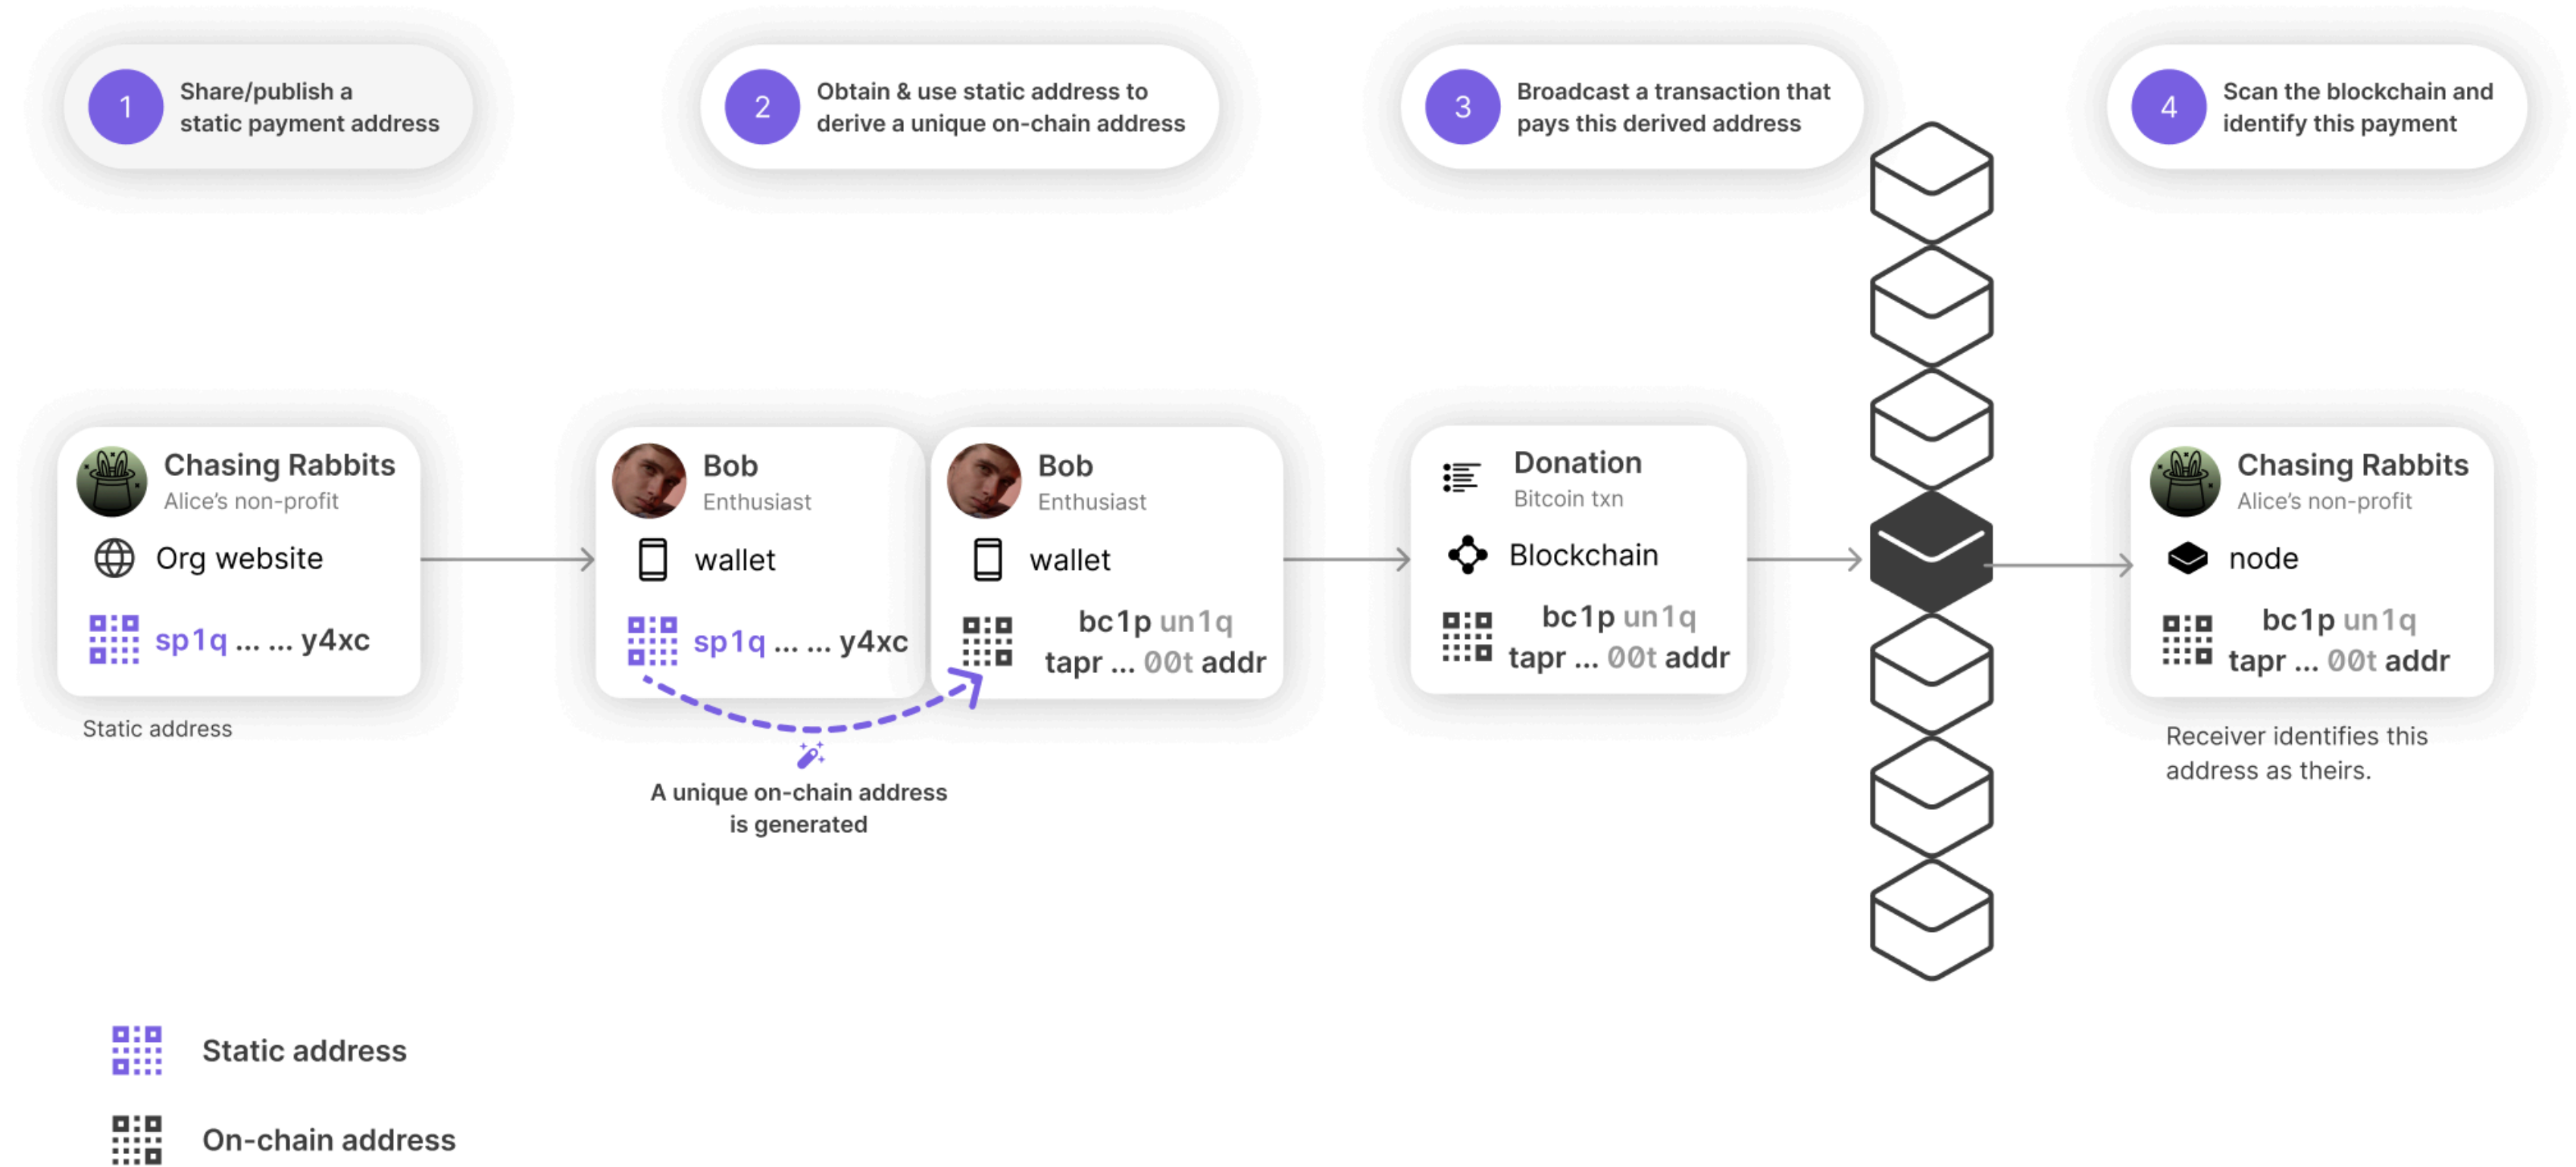

Presentations are tools that can be used as speeches.

Simpler wallets

Presentations are tools that can be used as speeches.

Silent payments in 4 steps

THE

EXPERIENCE

.....

ALL ABOUT UX

Killer UX is the key driver for successful privacy tools, and Silent Payments are no exception.

THE SYNC EXPERIENCE

Instant sync is the UX expectation in Bitcoin, Silent Payments can break that expectation.

We need to re-think wallet sync and change the paradigm.

BACKGROUND VS SCAN KEY

There are two key ways to improve the sync UX for Silent Payments.

Sync in the background regularly, or offload scanning to a third-party server via scan keys.

SP+ OR SP- ONLY?

Silent Payments can actually *simplify* wallets!

No need for derivation paths, pre-deriving addresses, no gap limit, etc.
